Core Data Science

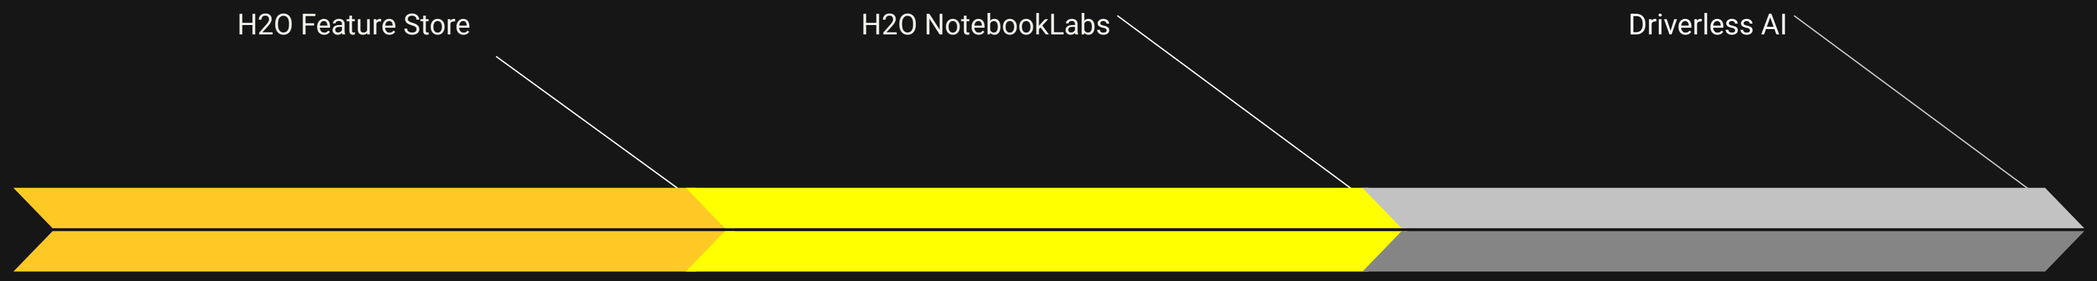
Plan Projects and Explore, Visualize, Prepare Data



Project Creation

Find and request access to existing projects with H2O Features Store. Create and manage your own data science projects.

Data Preparation

Manage feature pipelines with the Feature Store UI or easily use an API with managed notebooks in H2O NotebookLabs.

Data Visualization

Quickly visualize and understand your data with Driverless AI, with quick edits and data recipes for further prep.

Data Science and Machine Learning Techniques

AutoML

Automatically build tabular and time-series models with Driverlss AI.

Machine Learning Interpretability

Understand how a model makes decisions with advanced capabilities and business-friendly visuals.

Chat for Data Science

Solve data science problems in an interactive and chat-based way.

Label Genie

Hydrogen Torch

Data Labeling

Get help labeling data with H2O Label Genie.

Deep Learning

Create state-of-the-art models with no code in Hydrogen Torch.

Core Data Science

Model Consumption

AI Apps & Chatbots

Build custom UIs for web browser with python to allow all users to consume your models.

Deploy Apps

Easily deploy and manage your applications

Machine Learning Engineering

Training and Deploying Standalone LLM + Guardrails

Data Preparation

Create curated data pipelines for Generative AI applications with H2O Data Studio

Model Fine Tuning

Fine tune pretrained models on your prepared data using a low-code UI

Deploy LLMs

Leverage auto scaling to deploy LLMs

Apply Guardrails

Quickly build custom AI applications tailor made for a given use case

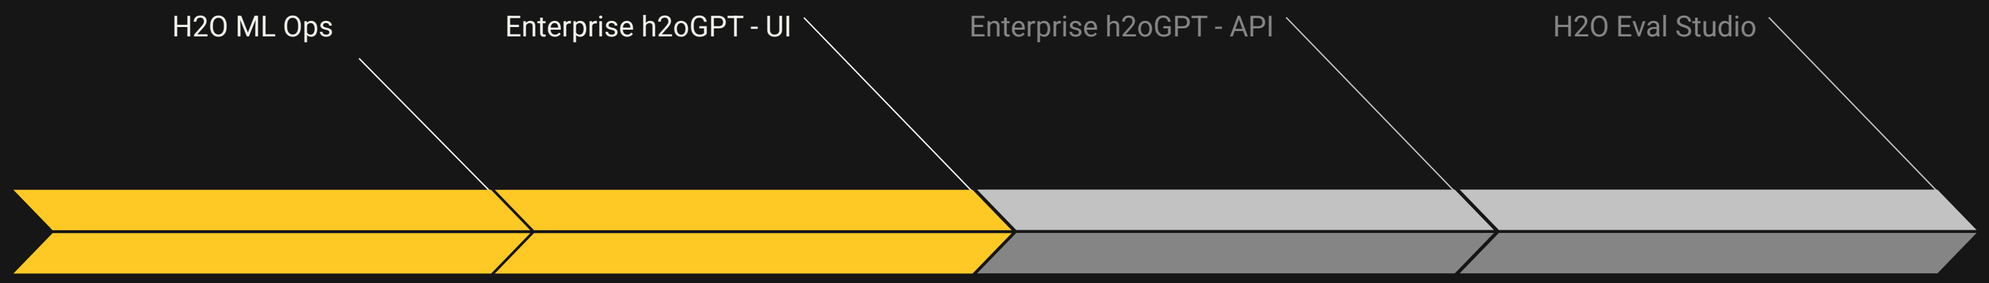
Machine Learning Engineering

Advanced RAG systems and AI Governance



Deploy LLMs

Leverage auto scaling to deploy LLMs

Foundational Gen AI

Connect your private data to be indexed and stored in VectorDB.

Foundational Gen AI

Use APIs for building AI applications, agents, or virtually any downstream applications

Consume Generative AI

Quickly build custom AI applications tailor made for a given use case
