Introduction to H2O Wave

What is H2O Wave?

- Open source low-code Python and R development framework
- Build and deploy amazing, real-time analytics with dramatically less effort.
- Capture data, visualizations, and graphics from multiple sources and broadcast them live over the web.
- Empower data scientists to rapidly prototype business facing AI applications
- Easily integrates with AutoML from the H2O AI Cloud and Enterprise h2oGPTe

You Can Use H2O Wave For...

- Dashboards and visualizations for live monitoring.
- Live information displays: news, tickers, health, or performance data.
- Apps that require instant notifications, updates, events, or alerts.
- Apps that involve messaging: chatbots, etc.
- Collaborative apps: whiteboards, sharing, etc.

You can also use H2O Wave when you find yourself reaching for a web application framework - it can handle regular (non-realtime) apps just fine.

Three Components of H2O Wave

H2O.ai

Application Code

Written in Python

h2o_wave package

Sends data to the content server

Determines how to handle user events

Content Server

10MB static, binary executable

Runs anywhere

Store site content

Transmits content changes to browsers

Transmits browser events back to apps

Browser-Based Client

Hosts the user interface built by the h2o_wave package

Renders content to users

Sends user events to content server

Tour of the Wave Website

Setting Up The Development Environment

IDE for App development

Everything is a .py file

- The only requirement is a text editor and a place to run python

We recommend using an IDE for App development

- PyCharm CE
- VSCode

You can use Wave snippets with PyCharm or VSCode

Writing Your First Wave App

How To Deploy Your Wave App

Practical Applications Showcase

Conclusions

Conclusion

- You now know how to:
  - Use the Wave Documentation
  - Set Up Your Development Environment
  - Write & Deploy Your Wave App
  - Integrate h2oGPTe with Wave

- We encourage you to explore & contribute to our GenAI App Store by visiting **genai.h2o.ai**
